JORDAN HERRERA

FRONTEND DEVELOPER

ABOUT

Engineering student with a strong background of over a year in Frontend development. I have completed multiple projects involving various technologies, focusing on creating intuitive, responsive, and functional interfaces.

PROJECTS

Photoverse

Photoverse is a full-stack social network that harnesses the power of Laravel, Tailwind CSS, and Livewire to create a robust and visually appealing platform. Supported by an SQL database..

Arch Studio

I developed a 4-page website with map APIs using React Leaflet. I implemented form validation and designed the interface using Tailwind UI for an engaging user experience.

Web Portfolio

My personal portfolio, built in React, offers a dynamic experience with both dark and light theme options. Designed for global accessibility, the site features content in two languages, Spanish and English.
